

Before you begin

Installation of your Targa top takes 6 to 8 hours. You may want to print of these installation instructions or have them opened on your (portable) PC in your work area.

You will need following tools:

- Heavy duty upholstery glue (1 spray can)
- Glue suitable for PVC (1 small tube)
- Scissors
- Stanley knife
- Metric spanners (M13)
- Four large paper presses/clips (see pictures below)
- Ballpoint pen
- Masking tape
- Screwdrivers (flat and Phillips)
- Hairdryer

Use of the hairdryer is recommended to heat the vinyl so that it will stretch/manipulate more easily when contouring your top. If the temperature is below 65F you may also want to consider using the hairdryer to improve adhesion of the glue.

Removing your old Targa top

1. Remove the top from the car and lay upside down on a comfortable working height. Remove the steel cover plates at the front of the top (picture 1A) and the Targa top clips (picture 1B). Now remove the corner covers by loosening the screws and levering away from top (picture 1C). Your old headlining can now be removed.

2. Remove the rubber seals on both sides of your top by taking out the screws in the rubber apertures (picture 2A). Now remove the 2 steel guides left and right (picture 2B). Use a metric spanner (M13) to remove the top guide pins (picture 2C). Your roof skin can now be removed.
